Job Title: Managed Security Services System Engineer - Internship
Department: Managed Security Engineering Bratislava
Hiring Manager: Martin Vasilev
Email: martin.vasilev@att.com
Phone: 00421-2-50210436

Job Summary :

The Managed Security Services (MSS) Systems Engineer Internship position is a technical position requiring a set of programming skills. The individual will be responsible for programming tools/web development for the team based on the discussions with team members

Duties and Responsibilities :

Seeking a flexible student who is interested in security and routing engineering with programming skills (Web development etc...). Individual will join an existing global highly skilled team (members in both US and EMEA), whose mission is enablement of the Managed Security Services (MSS). The role may be working on Managed Security Services - Network Based (MSSNB) using Fortinet Firewall & Cisco/Juniper Routers and/or may be working on Premise Based (MSSPB) firewall solutions (e.g. Cisco ASA, Checkpoint on Resilience, Fortinet, Juniper, Blue Coat, MIDS) depending on the needs of the business.

Candidate should be a strong team player with good communications skills. The candidate needs to be a well organized person capable of working successfully on multiple projects at the same time while maintaining the highest level of detailed quality.

Experience Required :

- Written and spoken English
- Programming skills (web development etc...)
 - o PHP
 - o SQL
 - o JAVASCRIPT
 - o EXCEL
 - o HTML/XML
- Ability to work independently
